Our Patients
In 2018, CarePartners Rehabilitation Hospital served 133 patients with a primary diagnosis of hip fracture. 69 of those patients were female; 64 were male. The average age was 66.4 years.

How Long Our Patients Stay
Our patients stay in our inpatient rehabilitation program an average of 12.3 days, compared to a national benchmark of 11.5 days.

Rehab Care Provided
Rehabilitation nursing is provided 24 hours a day. Patients receive an average of 3 hours of therapy a day, 5 days a week. Based on individual need, some patients receive 15 hours of therapy over a 7-day period. Medical services are provided by a physician who is specially trained in physical rehabilitation.

How Our Patients Improve
We use a scoring system known as the FIM™ that measures the improvement patients achieve in specific functional tasks such as eating, personal care, walking, communicating and memory. In general, higher gains in FIM™ points indicate more improvement in function.

Where Our Patients Go After Rehab
Our goal is for our patients to return to a community setting whenever possible. Many times this is dependent upon the support and availability of caregivers in the home, so we work closely with families to teach them how to care for their loved one at home.

MEETING REHABILITATION GOALS
96% OF PATIENTS met their individual goals

PATIENT SATISFACTION
98.4% OF PATIENTS Responded “GOOD” or “VERY GOOD” WHEN ASKED ABOUT THE OVERALL CARE AT CarePartners REHABILITATION HOSPITAL
