Our Patients
In 2018, CarePartners Rehabilitation Hospital served 97 patients with a non-traumatic brain injury (NTBI) in our Brain Injury Program.

How Long Our Patients Stay
12.7 DAYS
Our patients stay in our inpatient rehabilitation program an average of 12.7 days, compared to a national benchmark of 11.6 days.

Rehab Care Provided
Rehabilitation nursing is provided 24 hours a day. Patients receive an average of 3 hours of therapy a day, 5 days a week. Medical services are provided by a physician who is specially trained in brain injury rehabilitation.

How Our Patients Improve
We use a scoring system known as the FIM™ that measures the improvement patients make in specific functional tasks such as eating, personal care, walking, communicating and memory. In general, higher gains in FIM™ points indicate more improvement in function.

Where Our Patients Go After Rehab
Our goal is for our patients to return to a community setting whenever possible. Many times this is dependent upon the support and availability of caregivers in the home, so we work closely with families to teach them how to care for their loved one at home.
