Our Patients
In 2018, CarePartners Rehabilitation Hospital served 380 patients in our Stroke Program. The average age of our stroke patients was 67.6 years. 21 of our stroke patients were under the age of 45. 205 of our stroke patients were male; 175 were female.

How Long Our Patients Stay
Our patients stay in our Stroke rehabilitation program for an average of 16.2 days, compared to a national benchmark of 14.6 days.

Rehab Care Provided
Rehabilitation nursing is provided 24 hours a day. Patients receive an average of 3 hours of therapy a day, 5 days a week. Based on individual need, some patients receive 15 hours of therapy over a 7-day period. Medical services are provided by a physician who is specially trained in stroke rehabilitation.

How Our Patients Improve
We use a scoring system known as the FIM™ that measures the improvement patients make in specific functional tasks such as eating, personal care, walking, communicating and memory. In general, higher gains in FIM™ points indicate more improvement in function.

Where Our Patients Go After Rehab
Our goal is for our patients to return to a community setting whenever possible. Many times this is dependent upon the support and availability of caregivers in the home, so we work closely with families to teach them how to care for their loved one at home.
