Our Patients
In 2019, CarePartners Rehabilitation Hospital served 90 patients with a primary diagnosis of major multiple trauma (with brain or spinal cord injury, 20 patients) and (without brain or spinal cord injury, 70 patients).

How Long Our Patients Stay
Our patients stay in our inpatient rehabilitation program an average of 11.3 days (MMT-MBSCI) and 11.1 days (MMT-BSCI) compared to a national benchmark of 12.2 (MMT-NBSCI) and 15.0 (MMT-BSCI) days.

Rehab Care Provided
Rehabilitation nursing is provided 24 hours a day. Patients receive an average of 4 hours of therapy a day, 5 days a week. Medical services are provided by a physician who is specially trained in spinal cord rehabilitation.

How Our Patients Improve
We use a scoring system known as the FIM™ that measures the improvement patients make in specific functional tasks such as eating, personal care, communicating and memory. In general, higher gains in FIM™ points indicate more improvement in function.

Where Our Patients Go After Rehab
Our goal is for our patients to return to a community setting whenever possible. Many times this is dependent upon the support and availability of caregivers in the home, so we work closely with families to teach them how to care for their loved one at home.

For information on any CarePartners services, please call 828-277-4800 or visit carepartners.org
