The National Federation of State High School State Associations’ (NFHS) Sports Medicine Advisory Committee has
developed a medical release form for wrestlers to participate with skin lesion(s) as a suggested model you may consider
adopting for your state. The NFHS Sports Medicine Advisory Committee (SMAC) conducted a survey among specialty,
academic, public health and primary care physicians and reviewed extensively the literature available on the
communicability of various skin lesions at different stages of disease and treatment. No definitive data exists that allow us
to absolutely predict when a lesion is no longer shedding organisms that could be transmitted to another wrestler. Another
finding from the survey was the significant differences that exist among physicians relating to when they will permit a
wrestler to return to participation after having a skin infection.

Neither the NFHS nor the NFHS SMAC presumes to dictate to professionals how to practice medicine. Nor is the
information on this form meant to establish a standard of care. The NFHS SMAC does feel, however, that the guidelines
included on the form represent a summary consensus of the various responses obtained from the survey, from conversations
and from the literature. The committee also feels that the components of the form are very relevant to addressing the
concerns of coaches, parents, wrestlers and appropriate health-care professionals that led to the research into this subject
and to the development of this form.

GOALS FOR ESTABLISHING A WIDELY USED FORM:
1. Protect wrestlers from exposure to communicable skin disorders. Although most of the skin lesions being discussed generally have no
major long term consequences and are not life threatening, some do have morbidity associated with them and student-athletes should be
protected from contracting skin disorders from other wrestlers or contaminated equipment such as mats.

2. Allow wrestlers to participate as soon as it is reasonably safe for them and for their opponents and/or teammates using the same mat.

3. Establish guidelines to help minimize major differences in management among appropriate health-care professionals who are signing
“return to competition forms”. Consistent use of these guidelines should reduce the likelihood wrestlers catching a skin disease from
participation and suffering from inequalities as to who can or cannot participate.

4. Provide a basis to support appropriate health-care professional decisions on when a wrestler can or cannot participate. This should help
the appropriate health-care professional who may face incredible pressure from many fronts to return a youngster to competition ASAP.
This can involve any student athlete who never wins a match or the next state champion with a scholarship pending.

IMPORTANT COMPONENTS FOR AN EFFECTIVE FORM:
1. Each state association needs to determine which appropriate health-care professional can sign off on this form.

2. Inclusion of the applicable NFHS wrestling rule so appropriate health-care professionals will understand that covering a contagious
lesion is not an option that is allowed by rule. Covering a non-contagious lesion after adequate therapy to prevent injury to lesion is
acceptable.

3. Inclusion of the date and nature of treatment and the earliest date a wrestler can return to participation. This should mitigate the need for
a family to incur the expense of additional office visits as occurs when a form must be signed within three days of wrestling as some do.

4. Inclusion of a “bodygram” with front and back views should clearly identify the lesion in question. Using non-black ink to designate skin
lesions should result in less confusion or conflict. Also including the number of lesions protects against spread after a visit with an
appropriate health-care professional.

5. Inclusion of guidelines for minimum treatment before returning the wrestler to action as discussed above. This should enhance the
likelihood that all wrestlers are managed safely and fairly.

6. Inclusion of all of the components discussed has the potential to remove the referee from making a medical decision. If a lesion is
questioned, the referee’s role could appropriately be only to see if the coach can provide a fully completed medical release form allowing
the wrestler to wrestle.

This form may be reproduced, if desired, and can be edited in anyway for use by various individuals or organizations. In addition, the NFHS
SMAC would welcome comments for inclusion in future versions as this will continue to be a work in progress.

Revised/Approved by NFHS SMAC - April 2015
MEDICAL RELEASE FOR WRESTLER TO PARTICIPATE WITH SKIN LESION

Name: ________________________________ Date of Exam: ___ / ___ / ___

Diagnosis ____________________________

_______________________________

Location AND Number of Lesion(s) ________________________________

Medication(s) Used to Treat Lesion(s):

_______________________________

Date Treatment Started: ___ / ___ / ___ Time: ______:

Form Expiration Date for Lesion (Note on Diagram(s)): ___ / ___ / ___

Earliest Date the Wrestler May Return to Participation: ___ / ___ / ___

Provider Signature __________________________ Office Phone #: __________

Provider Name (Must Be Legible) __________________________

Office Address __________________________

Below are some treatment guidelines that suggest MINIMUM TREATMENT before return to wrestling:

BACTERIAL DISEASES (IMPETIGO, BOILS): To be considered “non-contagious,” all lesions must be scabbed over with no oozing or discharge and no new lesions should have occurred in the preceding 48 hours. Oral antibiotic for three days is considered a minimum to achieve that status. If new lesions continue to develop or drain after 72 hours, MRSA (Methicillin Resistant Staphylococcus Aureus) should be considered.

HERPETIC LESIONS (SIMPLEX, FEVER BLISTERS/COLD SORES, ZOSTER, GLADIATORUM): To be considered “non-contagious,” all lesions must be scabbed over with no oozing or discharge and no new lesions should have occurred in the preceding 48 hours. For primary (first episode of HERPES GLADIATORUM), wrestlers should be treated and not allowed to compete for a minimum of 10 days. If general body signs and symptoms like fever and swollen lymph nodes are present, that minimum period of treatment should be extended to 14 days. Recurrent outbreaks require a minimum of 120 hours of oral anti-viral treatment, again so long as no new lesions have developed and all lesions are scabbed over.

TINEA LESIONS (RINGWORM ON SCALP OR SKIN): Oral or topical treatment for 72 hours on skin and oral treatment for 14 days on scalp.

SCABIES, HEAD LICE: 24 hours after appropriate topical management.

CONJUNCTIVITIS (PINK EYE): 24 hours of topical or oral medication and no discharge.

MOLLUSCUM CONTAGIOSUM: Upon treatment with curettage and hyfrecator, may cover with biooclusive and wrestle immediately.

NOTE TO APPROPRIATE HEALTH-CARE PROFESSIONALS: Non-contagious lesions do not require treatment prior to return to participation (e.g., eczema, psoriasis, etc.). Please familiarize yourself with NFHS Wrestling Rules 4-2-3, 4-2-4 and 4-2-5 which states:

“ART. 3 . . . If a participant is suspected by the referee or coach of having a communicable skin disease or any other condition that makes participation appear inadvisable, the coach shall provide current written documentation as defined by the NFHS or the state associations, from an appropriate health-care professional stating that the suspected disease or condition is not communicable and that the athlete’s participation would not be harmful to any opponent. This document shall be furnished at the weigh-in for the dual meet or tournament. The only exception would be if a designated, on-site meet appropriate health-care professional is present and is able to examine the wrestler either immediately prior to or immediately after the weigh-in. Covering a communicable condition shall not be considered acceptable and does not make the wrestler eligible to participate.”

“ART. 4 . . . If a designated on-site meet appropriate health-care professional is present, he/she may overrule the diagnosis of the appropriate health-care professional signing the medical release form for a wrestler to participate or not participate with a particular skin condition.”

“ART. 5 . . . A contestant may have documentation from an appropriate health-care professional only indicating a specific condition such as a birthmark or other non-communicable skin conditions such as psoriasis and eczema, and that documentation is valid for the duration of the season. It is valid with the understanding that a chronic condition could become secondarily infected and may require re-evaluation.”

Once a lesion is considered non-contagious, it may be covered to allow participation.

DISCLAIMER: The National Federation of State High School Associations (NFHS) shall not be liable or responsible, in any way, for any diagnosis or other evaluation made herein, or exam performed in connection therewith, by the above named provider, or for any subsequent action taken, in whole or part, in reliance upon the accuracy or veracity of the information provided herein.
